Performance Testing

<i>Date</i>	<i>10 November 2022</i>
<i>Team ID</i>	<i>PNT2022TMID39751</i>
<i>Project Name</i>	<i>Retail Store Stock InventoryAnalytic</i>
<i>Maximum Marks</i>	<i>10 Marks</i>

Model Performance testing:

S.No.	Parameter	Screenshot / Values
1.	Dashboard design	<p>The dashboard is created with three category i.e. Overview, Sales, Price.</p> 

		 <p>The screenshot displays a Cognos Analytics dashboard with four visualizations. The top-left visualization is a hierarchical tree titled 'data hierarchy colored by estoquedata and sized by venda'. The top-right visualization is a bubble chart titled 'venda by preco and preco colored by data and venda'. The bottom-left visualization is a scatter plot titled 'vendapreco to estoque with line width data'. The bottom-right visualization is a bar chart titled 'preco colored by venda sized by data'. The dashboard has a tabbed interface at the top with tabs labeled Tab 1 through Tab 10.</p>
2.	Data Responsiveness	The data is downloaded from an external API and uploaded in the IBM cognos analytics with watson and a data module is created.
3.	Amount Data to Rendered (DB2 Metrics)	The dataset which is downloaded from the external API and uploaded is rendered from the DB2.

4.	Utilization of DataFilters	The data filters are used for preprocessing the data i.e cleaning of data , removing the null value.The unwanted columns are removed from the data-set and the additional data which are required are added to the data-set.
----	----------------------------	--

5.	Effective Story User	<p>The story is created with two scenes i.e. Introduction, sales by year & stock.</p> 
----	----------------------	--

6.

Descriptive Reports

The report is created with two visualisations i.e.result, sales greater than 350.
